7/10/2011

**20 – FYI - <u>SEARCHING FOR MULTIPLE WORDS OR FILES ON TRVN.</u>** Maybe I am dense and everyone else already knows this, but I just figured out how to perform a SEARCH on TRVN for multiple words or files, even some common words. I'll give you an example.

Crusingator's + 2010 + 43QGP + Allegro + Bus. The correct way to type the search information in the search function is this way:

Crusingator's(space)+(space)2010(space)+(space)43QGP(space)+(space)Allegro(space)+(space)Bus

If you perform the above search as of this date, you will find 6 posts which contain ALL of the above search information within EACH post.

Remember to enter a key space between Crusingator's and the + then another key space before typing the second search word, 2010. Now, GO HAVE SOME FUN, SEARCHING TRVN.
