

## 2010 43QGP Allegro Bus

4/24/2013

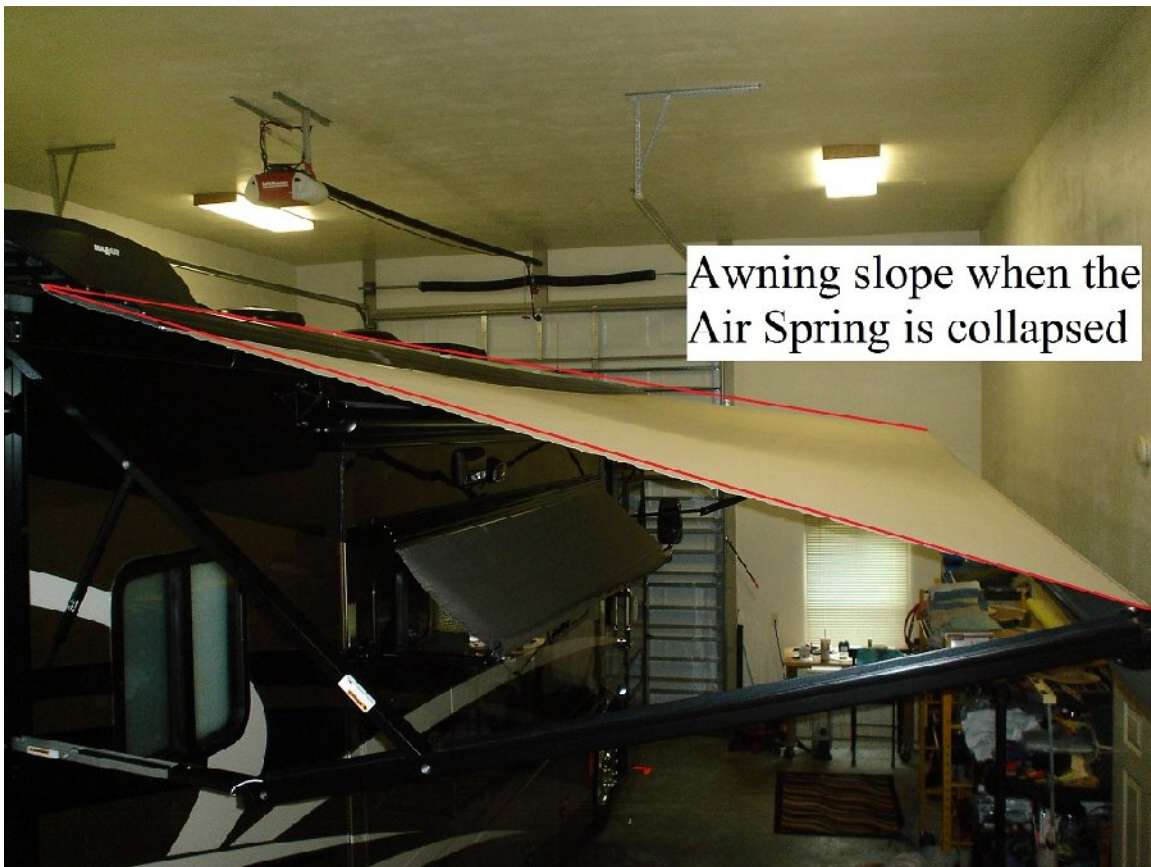

86 - FYI – **DOMETIC PATIO AWNING RAIN DUMP FEATURE.** I had heard our patio awning had a rain dump feature just had not explored the feature until recently when cleaning the coach.

The left awning arm has an air spring built into the lower arm this allows that arm to collapse/lower in order to dump water from the accumulating on the patio awning.

Air Spring held in collapsed position to demonstrate the awnings dump feature

Awning slope when the Air Spring is collapsed

It is easy to see the difference in the awnings angle between the first photo and the last photo. The above photo shows the big slope difference between the front and rear edges of the patio awning. I do not know how many gallons or how much weight in pounds of water is required to activate the dump feature.
