

## 2010 43QGP Allegro Bus

1/19/2014

**99 - FYI – REPLACING THE HEADLIGHT BULBS ON THE ALLEGRO BUS.** Two things prompted me to write this file, one was a TRVN member's need of instructions on how to replace a blown bulb on his coach the second reason was my desire to improve the quality of the headlight illumination on our coach.

Above is a photo of the DS (driver side) of our Allegro Bus headlight fixture. As seen above I noted the low beam and high beam wiring harnesses. I began this bulb replacement by removing the two wire low beam wiring harness by just pulling straight out so it could slip off the two pins.

The next step is to remove the rubber boot by pulling on the top and bottom rubber tips you may need to work the boot around a little if it is stuck. After

the boot has been removed you will see the spring clip holding the bulb socket in place.

The spring clip is unlatched by depressing the clip where I noted "Spring Clip Latch" in the above photo then moving the clip to the side enough for the clip to bypass the fixture, then you can swing the clip to the opposite side releasing the socket, as shown in the photo below. Make sure to hold your finger on the back of the bulb socket to prevent the bulb socket from falling once the clip has been unlatched.

After removing the bulb socket the old bulb can be pulled out of the socket then a new bulb may be pushed back into the socket.

Our Allegro Bus uses the **H1** bulb for both High and Low beam headlights. I purchased a four pack to replace the four bulbs on our coach the new bulbs are designed to provide an EXTREME BLUE COLOR, rated at 8,000K (Kelvin) the bulbs are sold as a Xenon HID look Halogen Bulb.

Will they perform as I desire, only time will tell me that.

The bulbs were purchased on E-bay from this seller.
