**112 - FYI – CORRECT SIZE OF THE AC/HP FILTERS.** More than once a TRVN member has asked for the size of the OEM air filters. On one of our trips thru Red Bay a complete second set of AC/HP filters was purchased, at that time the individual cut filters were less than \$ 1.00 each.

As seen in the above photo, the diameter of the foam filter is 5 1/4" the diameter of the hole in the center is 1/2". The filter material is 1/4" thick. I find exchanging the filters every few weeks by using the second set of filters easier. Then the filter are washed, allowed to air dry then stored in a zip lock bag until next time. IMO, rotating the filters in this manner is easier than just having one set to remove, clean, dry and re-install.
