

2010 43QGP Allegro Bus

1/6/2012

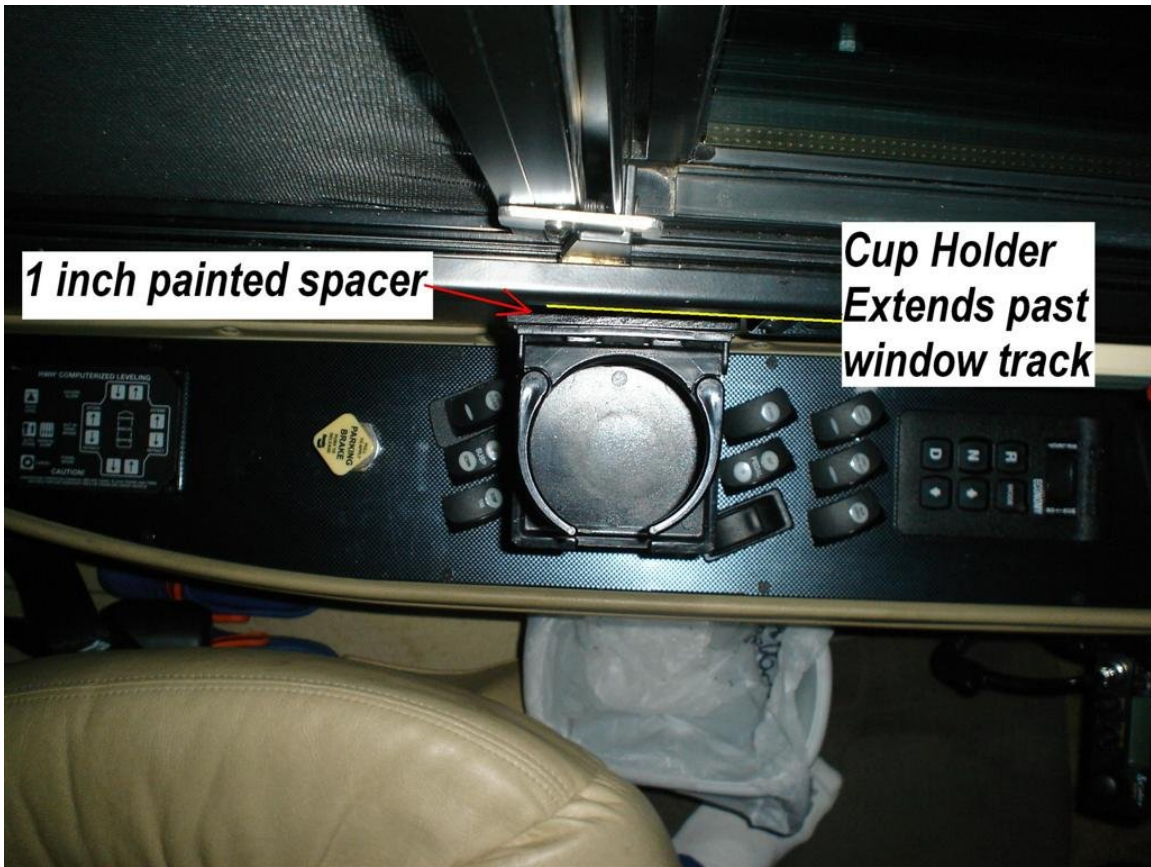

FORTY-FIFTH - coach modification - DRIVER SIDE CUP HOLDER.

One of the first coach modifications we made however un-documented until now. The Allegro Bus as well as other Tiffin coach's with electric powered driver side windows are built using a guide for the power track which attaches to the window. This guide extends over the side of the window causing the guide to interfere with placing a cup into the cup holder Tiffin installed under the window.

In an effort to make the cup holder MORE user friendly a piece of hardwood was cut to the outside dimensions of the cup holder. Three holes were drilled thru the wood in alignment with the holes in the cup holder. The wood was painted black to match the cup holder. The three original screws were replaced with screws 1 inch longer.

Below is a photograph of the modified cup holder in the closed position.

As seen in the above photo, the cup holder NOW is able to accommodate the larger sized soft drink cups. Before the modification I was unable to place my larger drink cups in the holder without fear of having them spill.
