SEVENTY-THIRD - coach modification – **WHIRLPOOL WASHER DRAIN FILTER ACCESS**. After recently finishing accessing and cleaning the drain filter on our Whirlpool washer, then putting a little thought into future filter service the decision was made to modify the method for accessing the drain filter in the future.

After a few measurements were taken it was decided to replace the two wood blocks with a $\frac{1}{2}$ " thick piece of plywood cut 24" long by $2\frac{1}{2}$ " wide.

Prior to installing the plywood was stained to match the coach's interior woodwork.

As seen above and below after the piece of blocking plywood was installed using three screws it is easy to open/close and remove/install the washer's front service panel. Time was taken to move/straighten the wood blocking at the rear of the washer thus permitting centering the washer in its closet.
